PROFESSIONAL SUMMARY

Backend Engineer with 2 years of experience developing RESTful APIs and backend applications using Node.js, JavaScript, PostgreSQL, MySQL, MongoDB, Redis, and AWS. Experienced in delivering enterprise and startup projects involving authentication, third-party integrations across EV mobility and enterprise applications, real-time communication, and cloud services. Strong experience collaborating with clients, cross-functional teams, and QA throughout the software development lifecycle to deliver reliable production-ready solutions.

EDUCATION

Bachelor of Technology in Chemical Engineering — June 2019 – May 2023
Rajiv Gandhi University of Knowledge and Technologies RK Valley, Kadapa, Andhra Pradesh — CGPA: 8.6
Pre-University Course — April 2016 – May 2018
Rajiv Gandhi University of Knowledge and Technologies RK Valley, Kadapa, Andhra Pradesh — CGPA: 9.3

TECHNICAL SKILLS

- **Programming Languages:** JavaScript, TypeScript
- **Backend Development:** Node.js, Express.js, RESTful APIs, Socket.io, GraphQL
- **Databases & ORM:** SQL, PostgreSQL, MySQL, MongoDB, Sequelize ORM
- **Caching & Messaging:** Redis, Redis Pub/Sub
- **Cloud & DevOps:** AWS (S3, EC2), Docker
- **Version Control:** Git
- **Frontend Development:** React.js, Zustand, Tailwind CSS, HTML5, CSS3

PROFESSIONAL EXPERIENCE

ACL Digital

Software Engineer | December 2025 - Present

- Designed and implemented a reusable authentication middleware for Motorola Solutions Asset Manager service using JWT, JWKS signature verification, automatic key refresh, and scope-based authorization to secure 15+ enterprise APIs.
- Engineered a Singleton-based JWKS caching mechanism to minimize repeated public key retrievals, improving authentication performance while supporting enterprise key rotation.
- Built a Mock Keycloak service exposing authentication token and JWKS endpoints, enabling parallel backend development before enterprise identity infrastructure became available.
- Implemented scope-based authorization, retry mechanisms, and alarm notification workflows to strengthen authentication reliability and failure handling.
- Collaborated with QA and enterprise integration teams during System Integration Testing (SIT), validating authentication, backend integration, and UI defects to support production readiness.
- Investigated and resolved authentication session issues during production integration by identifying browser-side token persistence and storage management problems.

FPLE Technology Pvt Ltd

Node.js Backend Developer– May 2025 – November 2025

- Engineered a real-time conversation transfer workflow using Redis Pub/Sub and Socket.io, enabling seamless ticket ownership transfer between support agents while preserving chat history and conversation state.
- Designed an automated ticket lifecycle mechanism using Redis TTL and MySQL bulk updates to efficiently identify and close inactive support sessions without manual intervention.
- Optimized Redis-based agent presence tracking by eliminating duplicate online registrations through unique identifier management, improving real-time dashboard accuracy.
- Improved backend reliability by standardizing MySQL connection pool management and ensuring consistent connection release across API workflows.
- Developed customer satisfaction (CSAT) and agent rating APIs supporting post-conversation feedback collection and operational reporting.
- Worked within a two-developer backend team to independently design, develop, debug production-ready backend services for a real-time customer support platform

- Architected and built a centralized BackOffice (BO) — a single full-stack platform unifying merchants, admins, and super-admins to manage accounts and tickets in one place — using React.js, Zustand, Node.js, and MySQL, replacing fragmented tooling and streamlining operations across 10+ merchants.

Reached Technologies & IT Consulting Pvt Ltd — Node.js Backend Developer | July 2024 – May 2025

- Designed and developed end-to-end backend services powering user onboarding for the EVPitStop platform, including profile management, address registration, vehicle onboarding, and identity verification workflows.
- Implemented secure mobile authentication using MSG91 OTP verification, followed by JWT-based user authentication and email verification workflows.
- Integrated AWS S3 for secure storage and retrieval of user profile images, vehicle photographs, and registration certificate (RC) documents.
- Designed relational database models supporting hierarchical vehicle selection across vehicle type, brand, model, and variant entities.
- Integrated third-party vehicle registration APIs to validate RC ownership against user profile information, enabling automated verification workflows with Super Admin approval for exceptions.
- Developed subscription-based access controls for vehicle challan services, enabling feature gating based on user verification and active subscription status.
- Migrated backend persistence from MongoDB to PostgreSQL using Sequelize ORM, redesigning data models, validating API compatibility, and supporting a seamless production handover.
- Collaborated directly with clients and project management in a startup environment to gather requirements, design backend solutions, and deliver production-ready features.
